

## Atlanta Humane Society Partner Personality Profile Key

- Please use this key to assess the behavior of your potential AHS transport candidates. These results should be based on observations you make during day-to-day operations at your organization; pulling out animals for focused assessment is not necessary unless these results cannot be gathered through day-to-day observation.
- Any dog under 5 months old does NOT need a behavior assessment.
- Dogs that score **all A's and/or B's** are considered good candidates for transfer to AHS.
- If a dog scores **any C's**, they MUST be cleared by the Animal Logistics Team before transfer. These exceptions are only made in special circumstances.
- Any dogs that score **lower than a C** in any category are not transfer candidates to AHS.
- Other considerations: Adult bully breeds, aside from exceptions, are not generally accepted from our partners outside of Metro-Atlanta. We are committed to helping locally with bully breeds before importing them from out of the area. Any seniors, adult bully breeds, or medical cases MUST be cleared with the Animal Logistics Team prior to transfer to AHS, regardless of behavior results.
- Once you have scored your transfer candidate, please fill out their results on the "Behavior-Dog" section of the Transport Spreadsheet. (See Below)

|    | A                  | B           | C       | D            | E                       | F      | G             |

## Behavior Results

| <b>Results:</b>  | <b>A</b>  | <b>B</b>   | <b>C</b>  | <b>D</b>  | <b>E</b>  |
|--|---|--|---|---|---|
| <u><b>Kennel Behavior</b></u>  | Comes to front of kennel with loose, wiggly body language to greet people   | Comes to front of kennel with encouragement, loose body language   | Hesitant to approach, nervous but may come with encouragement   | Stiff body language, will not approach, barrier reactive  | Growling, snapping, lunging, barrier reactive   |
| <u><b>On Leash Behavior</b></u>  | Walks politely, can be controlled by inexperienced walker   | Some pulling, can get distracted, would benefit from experienced walker  | Pulls hard, may get mouthy or over aroused on leash, needs experienced walker                               | Drags handler, unable to be redirected, lunging towards distractions  | Cannot be controlled, bites up leash, redirects overarousal on handler  |
| <u><b>Handling</b></u>   | Happy, wiggly body language when petted, solicits attention, calmly and loosely allows feet/ears/mouth to be touched                | Allows petting with loose body language, feet/ears/mouth can be touched with encouragement                                       | Avoids or shrinks away from petting, struggles to get away or avoids feet/ears/mouth being touched          | Stiff body, will not allow feet/ears/mouth handling, muzzle punching or spinning around toward handler                    | Growls, snaps, bites or shows teeth when handled  |
| <u><b>Resource Guarding From People</b></u>  | Loose, wiggly when taking food and toys, happily allows or walks away   | May gulp when taking food or hesitate to give toys, loose wiggly body language, will still allow you to take                     | Resists having food and toys taken, body becomes stiff or dog may block from taking                         | Growls, snaps, or freezes when taking food or toys  | Bites/attempts to bite or lunges when taking food or toys   |
| <u><b>Group Housing/Play Group Behavior</b></u><br>(If single housed or no playgroup, omit this section) | Gets along well with all kennel mates, no altercations reported   | May scuffle with incompatible kennel mates, no injuries and generally gets along with other dogs                                 | Fights with multiple dogs, minor injuries reported, guards food/toys from others                            | Demonstrates barrier reactivity, redirects on other dogs when over aroused, multiple injuries reported                    | Serious injury caused for any reason, cannot be housed with other dogs  |
| <u><b>Single Housing Behavior</b></u><br>(If group housed or in playgroup, omit this section)            | Loose body language, positive experiences if has met other dogs, demonstrates playful or wiggly on-leash behavior around other dogs | Loose body language, pulls towards other dogs on leash but easily redirected every time, appropriately greets dogs if introduced | Intense focus on other dogs when on leash, difficult to redirect, inappropriately greets dogs if introduced | Demonstrates barrier reactivity, unable to redirect around other dogs, may redirect on handler, needs to be an "only dog" | Confirmed history of dog aggression, worrisome reactivity on leash around other dogs, demonstrates intense barrier reactivity |
